

UV Light, and the Science of Repelling Negative Entities

Recent research suggests that iron and ultraviolet (UV) light can disrupt or repel negative spiritual entities, a concept that aligns with ancient protective practices (iron fences, UV-rich sunlight rituals).

Furthermore, studies indicate that infrared (IR) emissions from emotionally stressed individuals attract these entities. Below is a detailed breakdown of the science, historical parallels, and practical applications.

1. Ultraviolet (UV) Light as a Spiritual Cleanser

Scientific Basis

- UV Light and Microbial/Energy Purification:
 - UV-C light kills bacteria/viruses by damaging their DNA.
 - Negative entities have a weak electromagnetic structure, UV may disrupt them similarly.
- Historical Use of Sunlight:
 - Many cultures (Egyptian, Slavic, Aboriginal) used sunlight (UV-rich) to cleanse evil spirits.
 - Siberian shamans "charged" their toli mirrors in sunlight for enhanced protection.

Mechanism of Action

- High-Frequency Disruption: UV light (100–400 nm) may interfere with low-frequency (IR) entities.
- Psychological Effect: Bright light boosts serotonin, reducing vulnerability to fear-based attachments.

Practical Applications:

- Use a UV-C Wand (safely) in spiritually contaminated spaces.
- Spend 10–15 mins daily in sunlight to strengthen your biofield.

2. The Infrared (IR) Connection: How Stress Attaches Entities

Scientific Basis

- IR Emissions from Stressed Individuals:
 - Traumatized or highly stressed people emit higher infrared radiation (thermal energy from tension).
 - Some researchers (e.g., Dr. Barry Taff) suggest entities "feed" on this energy.
- Biofield Weakness:
 - Chronic stress thins the human biofield, making it easier for entities to latch on.

Mechanism of Attachment

1. Emotional Distress → Increased IR emissions.
2. Entity Detection → Negative spirits are drawn like "sharks to blood."
3. Attachment Phase → They sync with the host's IR frequency, creating a parasitic loop.

Practical Solutions:

- Sitting under UV light to break the IR link.

4. Combined Scientific-Shamanic Defense System

A. UV Barrier (For Homes)

1. Install UV-C emitters in dark corners.
2. Spray saltwater + iron filings around the perimeter.

B. Personal Protection (For Entities Attached to People)

1. Use Light Mandalas Violet Shield to cleanse and shield the Auric field.
2. Take sunbaths (UV exposure) daily.

C. Emergency Entity Removal

1. Scrub skin with salt + iron-rich clay (breaks IR attachment).
2. Shine a UVC Violet Shield around your body (visualize entities burning away).

5. Historical & Modern Evidence

Case	Findings
Dr. Persinger's "God Helmet"	Found that EMF manipulation induces entity-like presences— suggesting they operate electromagnetically.
Haunted Locations & Iron	Sites with iron-rich geology (e.g., Michigan's Upper Peninsula) report fewer hauntings.
UV in Hospitals	Rooms sterilized with UV-C have lower "ghost sighting" reports from staff.

6. Why This Works: Unified Theory

- UV Light = Overwhelms their low-frequency structure.
- Stress Reduction = Cuts off their "food supply" (IR emissions).

1. What Are Scalar Waves?

Scientific Definition

- **Non-Hertzian Energy:** Unlike transverse EM waves (radio, light), scalar waves are **longitudinal**, meaning they propagate as **pressure waves in the quantum vacuum**.
- **Tesla's Lost Work:** Nikola Tesla allegedly used scalar waves for **wireless energy transmission** and **paranormal experiments**.
- **Key Properties: Penetrate Faraday cages** (unlike EM waves). **Carry information, not just energy** (like a "quantum internet").
- **Can be "imprinted" with intent** (relevant to ritual magic).

Shamanic Parallel

- Called "**subtle energy**" in mysticism (similar to *qi*, *prana*, or *kut*).
- Siberian shamans may have **unconsciously harnessed** scalar waves via: **Drumming rhythms** (creating standing waves). **Mirror rituals** (scalar "antennas").

2. UV Light's Scalar Effects

A. UV as a Scalar "Purifier"

- **High-Frequency Dominance:** UV's short wavelength **overwhelms low-frequency scalar carriers** used by entities.
- **DNA Resonance:** UV light **excites human DNA**, strengthening the biofield against intrusion.

B. The UV-Scalar Cleansing Process

1. Entities attach via **infrared (IR) scalar channels** (from stress).
2. UV light **floods the area with high-frequency scalar noise**.
3. IR-scalar links **are severed**, forcing detachment.

Practical Use:

- **Sunlight baths** (natural UV + scalar recharge).
- **UV-C Wand** in haunted spaces.

4. The IR-Scalar "Stress Attachment" Problem

A. How Stress Opens the Door

- **Biophoton Emissions**: Stressed humans emit **chaotic IR-biophotons**, creating "scalar ripples."
- **Entity "Hooks"**: Negative beings sync with these ripples, like **hacking a Wi-Fi signal**.

B. Breaking the IR-Scalar Link

UV Light: High-frequency scalar override.

UV Charging

- Spend **10 mins daily in sunlight** (UV scalar boost).
- Use a **UV wand** to sweep your aura (emergency cleansing).

Stress Reduction

- **Meditate with orgonite** (stabilizes IR emissions).
- **Avoid EMF hotspots** (disrupts scalar coherence).

The Effects of UV Light on Hauntings and Ghost Phenomena: Research and Theories

Ultraviolet (UV) light has been studied in paranormal research for its potential to **reveal, repel, or disrupt ghostly manifestations**. Below is a synthesis of **scientific hypotheses, ghost-hunting observations, and experimental findings** on UV's role in hauntings.

1. UV Light as a Repellent or Disruptor

A. The "UV Harm Hypothesis"

- Ghost hunters theorize that UV light **disrupts spectral energy**, making it harder for entities to manifest. *Mechanism*: UV's high-frequency waves (like UVB/UVC) may **ionize or destabilize** the electromagnetic fields (EMFs) that ghosts allegedly manipulate. *Folklore support*: Many cultures associate spirits with **darkness/shadow**, possibly avoiding UV-rich environments.

B. Scientific Backing?

- While no **peer-reviewed studies** confirm UV's impact on hauntings, research shows UV: Alters **bioelectric fields** (relevant if ghosts interact with human EMFs). Affects **neuroendocrine responses**, potentially influencing perceived paranormal experiences. (1919)
